## [Sound-assisted emulsion manufacturing](#)

We have a portfolio of formulations and were one of the first 'industrial-scale' manufacturers in the hemp industry for water compatible hemp extract emulsions. After 2.5 years in the market, we have yet to have any products pulled off the shelf.

This allowed us to differentiate into more complex formulations, solving problems in the industry such as:

- stability
- bitterness
- container compatibility
- ripening/creaming as a function of pH
